Tasks in this workbook

The collection consists of pairs of identical patterns that are missing some dots. The aim of each task is to create two matching patterns.

The children compare the two patterns to identify which dots belong to the spots where the sticks are missing.

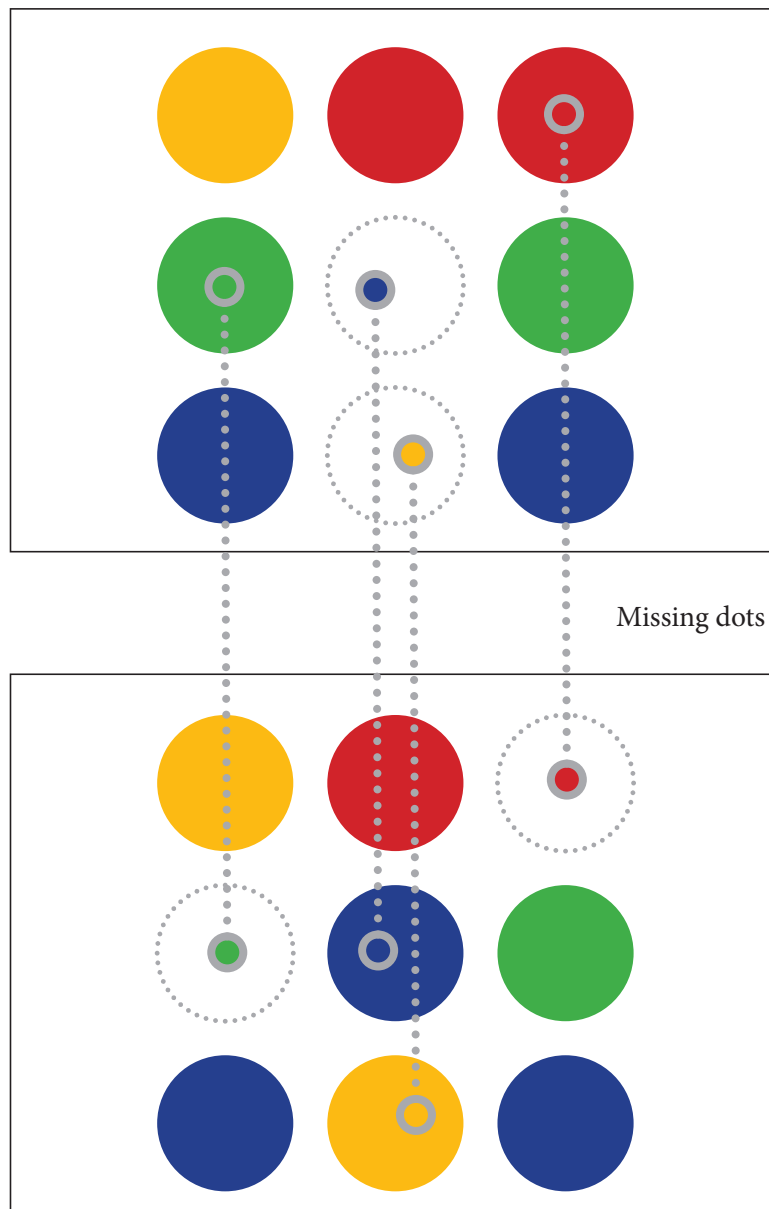

Each pattern consists of nine dots coloured in four colours: blue, red, yellow and green.

The number of missing dots in each pattern increases from the beginning to the end of the volume - this increases the difficulty of the challenges.

Instructions:

Compare the two patterns and fill in the missing dots to make two identical patterns.

Example:

About completing patterns

Why pattern matching and completing activities are important

Tasks in which children fill in missing elements in patterns stimulate their cognitive development.

Tasks that involve comparing patterns and identifying their missing elements stimulate observational skills development. When children compare two sets of patterns and identify the missing elements in one of them, their attention is strengthened and their ability to concentrate, compare and identify similarities and differences is reinforced.

The activities in this collection encourage children to observe and compare the patterns carefully, which can contribute to improving their ability to focus on details. As they compare patterns, their visual discrimination skills are improved; these later play a key role in important developmental challenges such as learning to read, write and other skills. Pattern matching also encourages the development of mental flexibility, adaptability and critical thinking and problem-solving skills, as children need to analyse and evaluate each template in order to create identical patterns. As these tasks require the child to recall the details of one template and compare them with another, they also help to strengthen visual and short-term memory.

Another important aspect of tasks that require comparing and completing patterns is stimulating patience and perseverance, which are essential life skills both for solving these types of tasks and for achieving goals in various other challenges that children will face later on.

Activity aids - circles

There are several possible ways to do the tasks in this workbook:

- version 1 - children compare two patterns on the template, both of which are incomplete; they place the corresponding dots in the empty spaces to create two identical patterns,
- version 2 - children pick the corresponding coloured dots from the pile and arrange them on a flat surface according to the patterns on the template; they then compare the two patterns and fill in the voids of both patterns with the corresponding dots to create two identical patterns.

On pages 6 to 11 you will find printed coloured dots that you can use for the activities in this workbook. Depending on the level of fine motor skills of the individual child (younger children can handle larger objects more easily, while smaller dots are more suitable for children who have already developed better fine motor control of their fingers) and the available room, you can print smaller (30 mm diameter), medium (70mm diameter) or larger dots (120mm diameter).

Print and then laminate as many copies of the sheets with coloured dots as you like, then cut out and save the dots for the children to use in the activities in this book.

About Brainscribed program

EXTENSIVE collection of activities

Brainscribed collection features thousands of worksheets with tens of thousands of challenges and activities of different types, created to stimulate the development of visual-motor integration and graphomotor skills in children. With its extensive corpus of materials, it is one of the most comprehensive collections of its kind, **globally**.

Based on BRAIN & EDUCATIONAL SCIENCE

Science fact:

Visual-motor exercises create functional connections among visual and motor regions in brains.

Science fact:

Fine motor skills, non-verbal intelligence and executive functioning are significantly interrelated.

Science fact:

Visual-motor exercises improve graphomotor skills which are important predictors of later academic achievement.

FUN and CHALLENGING activities

Brainscribed resources stimulate visual-motor integration development with countless fun and **developmentally appropriate** activities, designed to be **user friendly** both for adults working with children (easy selection of developmentally appropriate activities according to the child's current stage of visual-motor integration and skills), as well as for children (challenging activities).

Designed for EXPERTS and PARENTS

Brainscribed workbooks provide **teachers** and other **experts** (preschool, school, special education, therapy, etc.) with appropriate and gradually challenging tasks according to developmental needs of their children as well as offer **parents** developmentally appropriate and gradually challenging tasks for their children.

Activities for EVERY child ...

Every child's visual motor integration and skills development can **benefit** from graphomotor / visual-motor tasks and training at home or in a classroom.

... and for children with DIFFICULTIES

Visual-motor deficits and graphomotor difficulties can be debilitating for children. Teachers and other experts working with children with visual motor integration problems or/and with writing problems will find a plentitude of useful and engaging tasks for a **systematic intervention** in Brainscribed workbooks for children with visual-motor difficulties.

Different types of Brainscribed tasks

Brainscribed activities are organised into thematic workbooks.

In each volume, the difficulty of the tasks gradually increases.

All Brainscribed activities are designed to stimulate visual-motor integration and the development of graphomotor and other fine-motor skills in a way that is interesting and engaging for children.
