# About channelling

## Why channelling activities are important

Channeling tasks encourage and reinforce hand-eye coordination by asking the child to draw a line between two leading lines.

Guiding lines determine the path in the middle of which a child must draw a line. As children draw lines between them, they simultaneously trace and compare their developing lines with the guiding lines. This constant checking of the distance of the child's drawn line from the guiding lines reinforces the fine-motor control of hand movements. Therefore, channelling activities strengthen visual-motor integration and fine-motor control of hand and finger movements and lead to the acquisition of basic graphomotor, fine-motor and pre-writing skills and competences that will later play an important role in the development of writing and other specific finomotor skills.

## Worksheets and activities in this workbook

Activities and tasks in this workbook strengthen children's visual-motor integration and basic graphomotor skills by asking children to draw paths between the guiding lines (in the middle of the provided paths). In some activities dotted lines are provided to help children with drawing. Tasks start with wide and straight paths, and then gradually change to narrow and curvy paths as the child's skill level improves.

Activities and tasks difficulty increase throughout the workbook by:

- increased complexity of lines to be drawn,
- decreased distance between the guiding lines,
- decreased density of dots in helping lines.

Children should not change the position of the sheet, or rotate it, while drawing. They should be encouraged to draw each line in a single stroke, without stopping or shifting the drawing tool.

Example: wide path, sparse helping dots

Example: narrow path, sparse helping dots

Example: medium path, without helping dots

# Instructions

Ask the child to draw the path between the guiding lines to connect animal friends.

CONNECT THE FRIENDS. DRAW A LINE DOWN THE MIDDLE OF EACH PATH.

# About Brainscribed program

## EXTENSIVE collection of activities

Brainscribed collection features thousands of worksheets with tens of thousands of challenges and activities of different types, created to stimulate the development of visual-motor integration and graphomotor skills in children. With its extensive corpus of materials, it is one of the most comprehensive collections of its kind, **globally**.

## Based on BRAIN & EDUCATIONAL SCIENCE

### Science fact:

Visual-motor exercises create functional connections among visual and motor regions in brains.

### Science fact:

Fine motor skills, non-verbal intelligence and executive functioning are significantly interrelated.

### Science fact:

Visual-motor exercises improve graphomotor skills which are important predictors of later academic achievement.

## FUN and CHALLENGING activities

Brainscribed resources stimulate visual-motor integration development with countless fun and **developmentally appropriate** activities, designed to be **user friendly** both for adults working with children (easy selection of developmentally appropriate activities according to the child's current stage of visual-motor integration and skills), as well as for children (challenging activities).

## Designed for EXPERTS and PARENTS

Brainscribed workbooks provide **teachers** and other **experts** (preschool, school, special education, therapy, etc.) with appropriate and gradually challenging tasks according to developmental needs of their children as well as offer **parents** developmentally appropriate and gradually challenging tasks for their children.

## Activities for EVERY child ...

**Every** child's visual motor integration and skills development can **benefit** from graphomotor / visual-motor tasks and training at home or in a classroom.

## ... and for children with DIFFICULTIES

Visual-motor deficits and graphomotor difficulties can be debilitating for children. Teachers and other experts working with children with visual motor integration problems or/and with writing problems will find a plentitude of useful and engaging tasks for a **systematic intervention** in Brainscribed workbooks for children with visual-motor difficulties.

## Created by EXPERTS

Dr. Kristijan Musek Lešnik (Ph.D.) - Founder nad Chair of the Centre for Positive Psychology, University of Primorska, Slovenia - President of the Council of Experts for General Education of the Republic of Slovenia - past President of the Committee for the Children with Special Needs - past President of the National Testing Committee, Slovenia.

Dr. Petra Lešnik Musek (Ph.D. in Developmental Psychology) - Specialist of Clinical Psychology at the Department of Child Neurology, Paediatric Clinic of the University Clinical Centre, Ljubljana, Slovenia - combines years of experience in developmental psychology and family therapy in clinical work with children and their families.

# Different types of Brainscribed tasks

Brainscribed activities are organised into thematic workbooks.

In each volume, the difficulty of the tasks gradually increases.

All Brainscribed activities are designed to stimulate visual-motor integration and the development of graphomotor and other fine-motor skills in a way that is interesting and engaging for children.
