# About tracing circles

## Why tracing activities are important

Tracing activities stimulate the child's eye-hand coordination. As children draw along the template, their eyes compare the developing line with the shape they are tracing. This comparison is followed by micro-movements of the hands and fingers that help the child to guide the line along the intended path. The whole process reinforces visual-motor integration and fine motor control of hand and finger movements.

Tracing activities encourage the acquisition of spatial concepts, which later play an essential role in the development of pre-literacy skills, writing, drawing and other important graphomotor and fine-motor skills.

## Worksheets and activities in this workbook

The activities and tasks in this workbook are designed to strengthen children's visual-motor integration and basic graphomotor skills by tracing different sized dotted or dashed circles.

In some of the activities, the dotted circles are accompanied by outer or inner circles, which are provided to help support the children's drawing. The complexity of the activities and tasks increases throughout the workbook as the size of the circles to be drawn decreases.

Children should not change the position of the paper or turn it while drawing. They should be encouraged to draw each line in a single stroke without stopping or moving the drawing tool.

Example: bigger circle accompanied with inner circle.

Example: medium sized circle, without support.

Example: small circle with accompanied outer circle.

# About Brainscribed program

## EXTENSIVE collection of activities

Brainscribed collection features thousands of worksheets with tens of thousands of challenges and activities of different types, created to stimulate the development of visual-motor integration and graphomotor skills in children. With its extensive corpus of materials, it is one of the most comprehensive collections of its kind, **globally**.

## Based on BRAIN & EDUCATIONAL SCIENCE

**Science fact:**  
Visual-motor exercises create functional connections among visual and motor regions in brains.

**Science fact:**  
Fine motor skills, non-verbal intelligence and executive functioning are significantly interrelated.

**Science fact:**  
Visual-motor exercises improve graphomotor skills which are important predictors of later academic achievement.

## FUN and CHALLENGING activities

Brainscribed resources stimulate visual-motor integration development with countless fun and **developmentally appropriate** activities, designed to be **user friendly** both for adults working with children (easy selection of developmentally appropriate activities according to the child's current stage of visual-motor integration and skills), as well as for children (challenging activities).

## Designed for EXPERTS and PARENTS

Brainscribed workbooks provide **teachers** and other **experts** (preschool, school, special education, therapy, etc.) with appropriate and gradually challenging tasks according to developmental needs of their children as well as offer **parents** developmentally appropriate and gradually challenging tasks for their children.

## Activities for EVERY child ...

## ... and for children with DIFFICULTIES

**Every** child's visual motor integration and skills development can **benefit** from graphomotor / visual-motor tasks and training at home or in a classroom.

Visual-motor deficits and graphomotor difficulties can be debilitating for children. Teachers and other experts working with children with visual motor integration problems or/and with writing problems will find a plentitude of useful and engaging tasks for a **systematic intervention** in Brainscribed workbooks for children with visual-motor difficulties.

## Created by EXPERTS

Dr. Kristijan Musek Lešnik (Ph.D.) - Founder and Chair of the Centre for Positive Psychology, University of Primorska, Slovenia - President of the Council of Experts for General Education of the Republic of Slovenia - past President of the Committee for the Children with Special Needs - past President of the National Testing Committee, Slovenia.

Dr. Petra Lešnik Musek (Ph.D. in Developmental Psychology) - Specialist of Clinical Psychology at the Department of Child Neurology, Paediatric Clinic of the University Clinical Centre, Ljubljana, Slovenia - combines years of experience in developmental psychology and family therapy in clinical work with children and their families.

# Different types of Brainscribed tasks

Brainscribed activities are organised into thematic workbooks.

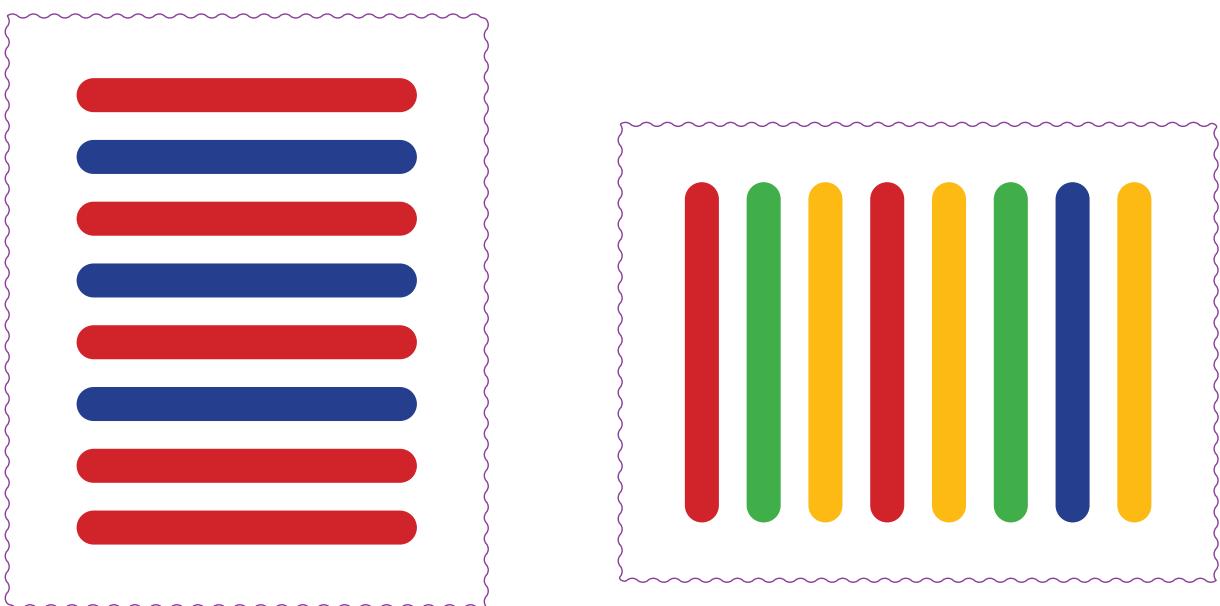

In each volume, the difficulty of the tasks gradually increases.

All Brainscribed activities are designed to stimulate visual-motor integration and the development of graphomotor and other fine-motor skills in a way that is interesting and engaging for children.
